

JANMOR 700

Janmor 700 is a small, fully functional and family-type houseboat designed in CE-C category where comfort was our main priority. Despite the small size, the boat looks really spacious since the cockpit and the big wheelhouse are located on one level, thanks to which there is only one big room divided by glass sliding door.

Additionally, panoramic windows allow to watch the surroundings and the whole crew may be together, irrespective of the weather.

In the wheelhouse, apart from the helmsman chair, there is a kitchenette with a sink, a cooker, a fridge, as well as cupboards and drawers. On the left-hand side of the wheelhouse there is a dining space with a table; lowering a table top gives us additional sleeping space.

Under the wheelhouse's floor, there are two banks for 2 persons and a spacious bathroom with the possibility to install a toilet, either a chemical or a sea toilet (electric one).

Thanks to a big water and fuel tank you may be independent for one week.

The yacht may be propelled with an outboard engine (Command Thrust recommend) or an inboard engine. Regardless of the engine, sailing is very economical and pleasant since the specially designed hull, apart from the keel strip, has two side keels improving the directional stability and manoeuvrability. A shallow draught allows approaching every water shore.

For sailing Janmor 700 no motor boat license is required.

Hull length	7,08 m (8,00 m with the swimming platform)
Total width	2,75 m
Height in cabin	1,95 m
Hull draught	0,40 m (0,55 m for the boat with diesel engines)
Weight without engine	About 1650 kg
Weight with engine	about 1800 kg (about 1900 kg for the boat with diesel engines)
Water tank	40 - 100 l
Dark water tank (option)	60 l
Crew	7 persons
Number of berths	5 (6)
Engine	10 - 60 HP
Fuel tank	70 - 90 l
Design category	„C”
Designer	Centkowski & Denert Design Studio
